Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 6) ☐ Other: ____.

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: --A METHOD OF BALANCING A DISK PACK IN A HARD DISK DRIVE--.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Applicant Admitted Prior Art (APA).

APA teaches a process of balancing a disk pack in a hard disk drive comprising steps of: providing the hard disk drive with a motor hub (11), a balance clip holder (15) in the motor hub, and a balance clip (13) seated in the balance clip holder as shown in Fig. 1; providing a bent tab (17) on one end of the balance clip to facilitate the disk pack balancing process; offsetting an opposite end (19) of the balance clip relative to a body of the balance clip as shown in Fig. 5; and slidably moving the balance clip relative to the balance clip holder to adjustably balance the motor hub for smooth rotation during

the disk pack balance process as shown in Figs. 1 and 5 (see also Specification, Paragraphs [6] and [7] of pages 2 and 3).

As per claim 4 an offset bend (19) of the balance clip is located immediately adjacent to the opposite end of the body as shown in Fig. 5.

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Wood et al. (US PAT. 5,555,144).

Wood et al. teach a process of balancing a disk assembly for a disk drive comprising steps of: providing the hard disk drive with a motor hub (12) as shown in Fig. 1, a balance clip holder (26) in the motor hub as shown in Fig. 3, and a balance clip (34) seated in the balance clip holder as shown in Fig. 4; providing a bent tab (62) on one end of the balance clip to facilitate the disk pack balancing process; offsetting an opposite end (62, the other side) of the balance clip relative to a body of the balance clip as shown in Fig. 5; and slidably moving the balance clip relative to the balance clip holder to adjustably balance the motor hub for smooth rotation during the disk pack balance process as shown in Figs. 6 and 7 (see also col. 5, line 17 to col. 8, line 22).

As per claims 2, 3, 7 and 8 the opposite end of the balance clip at a radius is less than a radius of the body of the balance clip or a pre-determined lesser radial distance with respect to the body of the balance clip.

As per claims 4 and 6 an offset bend (62) of the balance clip is located immediately adjacent to the opposite end of the body as shown in Fig. 5.

As per claims 5 and 6 the opposite end of the balance clip is free of contact with an outer diameter wall (52) of the balance clip holder as shown in Fig. 6.
